Multi-Touch Information Kiosk with Social Tagging

Sara Sharafoddin, B.Sc., TU Clausthal

Human-computer interaction is a term that has been used since the early 1980s. By increasing computer use, studying the interaction between people and computers, concerning themselves with the physical, psychological and theoretical aspects of this process, were fields that gained importance for researchers.

In this way we wrote an application that gives information about Clausthal. In this project we have used Mt4j technology and the written application provides multi-touch usage and social tagging.
